Diagnostic, Prognostic and Predictive Biomarkers in Prostate Cancer 2019

Message from the Guest Editors

Prostate cancer is the most common cancer in men in the Western world. Therefore, its early diagnosis, which is mainly based on serum prostate-specific antigen (PSA), has especially gained attention in several fields of research. New biomarkers in serum and urine have been described; for example, the prostate health index (PHI) or urinary *Prostate cancer gene 3 (PCA3)*, or others, including several biomarker-based multivariate models. However, not only the diagnosis, but also, more so, the prognosis or further prediction of this very common disease is important to know. Here, several new nucleic acid or protein-based tissue biomarkers have been described. As already described for other types of cancer, individualized medicine, such as theranostics, a combination of diagnostics and therapeutics, has been a new attraction for late stage prostate cancer, including castration resistant prostate cancer. This Special Issue focuses on “Diagnostic, Prognostic and Predictive Biomarkers in Prostate Cancer”. We warmly welcome submissions, including original papers and reviews, on this widely-discussed topic.

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences,
Sez-Biochimica, Faculty of Medicine, Università Politecnica delle
Marche, Via Ranieri 65, 60100 Ancona, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore
- Q1 (Organic Chemistry)
