

## Special Issue

# Recent Advances in QSAR/QSPR Theory

### Message from the Guest Editor

I deem that QSAR/QSPR Theory is the Theoretical and Computational Chemistry area which is actually developing at the most quick pace within the Chemistry realm. This quite interesting development is taking place at the formal and computational levels in such a way that now chemists can resort to this speciality to analyse their experimental results to have a valid and encompassing meaning of the numerical data. A large number of standard publications register these contributions, but it is also necessary to be able to resort to general overviews documents in order to compare different approaches and meaningful results derived from the application and development of this theory. This special IJMS issue on some recent advances in QSAR/QSPR theory aims to fulfil this purpose through the presentation of several contributions of some well-known leaders on this field. Eduardo A. Castro

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
