Molecular Research in Renal Tumors

Message from the Guest Editors

Renal tumors are grouped by the location in which they start growing and by their structure. There are several types of renal tumors: renal cell carcinoma (RCC), urothelial carcinoma, Wilms' tumor, renal adenoma, and more. This Special Issue on "Molecular Research in Renal tumors" aims to develop an updated picture of renal tumors (especially for renal cell carcinoma), focusing on molecular biomarkers, the multimodal treatment of locally advanced and metastatic disease, systemic therapy, and rare histology. **Keywords:**

- renal tumor
- kidney cancer
- advanced renal cell carcinoma
- combination therapy
- resistance
- metabolism
- antiangiogenic drugs
- tyrosine-kinase inhibitors
- immunotherapy

About the Journal

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.
