Supramolecular Polymers and Their Assemblies

Message from the Guest Editors

The development of supramolecular polymers over the last few decades has largely gone hand-in-hand with progress relating to the synthesis and characterization of new efficient and stimuli-responsive supramolecular building blocks. Great strides have been made in transforming these academically interesting macromolecules into assemblies with a range of applications, which concern advanced materials, medicine, and catalysis. In this Special Issue, we invite submissions focusing on new developments relating to the synthesis, self-assembly, and function of supramolecular polymers.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.
