

## Special Issue

# Therapeutic Molecular Targets in Tumor Microenvironment

### Message from the Guest Editor

The complexity and dynamic nature of the tumor microenvironment (TME) still remains a challenge for the pre- and clinical studies of tumors. TME components such as cancer-associated fibroblasts (CAFs), tumor-associated macrophages (TAMs) or tumor-infiltrating lymphocytes (TILs) are promising therapeutic targets associated with tumor regression and patient prognosis. They are mostly involved in cancer promotion and progression controlling various processes, i.e., cancer cell proliferation, angiogenesis, metastasis formation or epithelial to mesenchymal transition (EMT) phenomenon. TME promotes tumorigenesis by secreting cytokines and initiating extracellular matrix (ECM) remodeling. ECM proteins such as fibronectin, tenascin-C, and periostin can also play an important role in the regulation of cancer cell biology, metastatic potential, and patient outcome. Recent cancer immunotherapies are focused equally on tumor cells and on key components of the TME. In this Special Issue, we will discuss the biology and composition of TME, its prognostic and predictive value, as well as potential therapeutic strategies for cellular and molecular TME targets.

## About the Journal

### Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
