Bioactive and Uremic Toxins in Chronic Kidney Disease

Message from the Guest Editors

Chronic kidney disease (CKD) is a significant clinical and public health problem because it is associated with an increased risk of CKD-associated complications, hospitalization, and death. The prevalence of CKD continues to expand worldwide, and the morbidity and health care costs associated with CKD impacts health care costs across the globe. While much effort has gone into understanding the pathogenesis of CKD, progress on therapeutic options to prevent, or attenuate, the progression of renal dysfunction has been much slower. Dietary contents and their metabolites are known to be closely related to CKD progression. Accumulation of uremic retention solutes has been observed in patients with CKD and these retained solutes, called uremic toxins, contribute to uremic syndrome. Nowadays a great interest regards the diet and the nutrition in CKD and evidences suggest the positive role of these aspects in managing these patients. The aim of this Special Issue is to provide an updated point of view about the uremic toxins control and the bioactive, as natural nutraceuticals and dietary supplements, useful for CKD patients.

About the Journal

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Editor-in-Chief

Prof. Dr. José L. Quiles
Department of Physiology, Institute of Nutrition and Food Technology
"Jose Mataix", Biomedical Research Center, University of Granada,
Avda. Conocimiento s/n, 18100 Armilla, Granada, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
