

Special Issue

Translational Aspects of Infectious Diseases: From Bench to Bedside

Message from the Guest Editor

The COVID-19 pandemic has shown us the importance of anticipating infectious risks and the need for responses adapted to each individual's epidemiological situation. We have debated a lot about the interest of specific measures throughout the period, but beyond that, we have realized the importance of simple but applicable and applied prevention measures. In this future issue, we would like to bring to our readers a cross-sectional reflection including the different actors involved in the control and fight against infectious diseases. The topics discussed will open new horizons not only in the field of prevention, but also in the field of therapy. I hope that you will join us. Prof. Dr. Jean-ralph Zahar
