

## Special Issue

# Effects of Malnutrition of Immune Response

### Message from the Guest Editor

According to the World Health Organization, “malnutrition refers to deficiencies, excesses or imbalances in a person’s intake of energy and/or nutrients. The term malnutrition covers 2 broad groups of conditions. One is ‘undernutrition’—which includes stunting (low height for age), wasting (low weight for height), underweight (low weight for age) and micronutrient deficiencies or insufficiencies. The other is overweight, obesity and diet-related noncommunicable diseases. Around 1.9 billion adults worldwide are overweight, while 462 million are underweight.” Therefore, malnutrition represents a major medical problem that affects people of all ages and predisposes them to several diseases, affecting immune response. The scope of this Special Issue is to offer an updated view on the subject from different perspectives, including in vivo research on humans and animals, as well as in vitro research.

### Guest Editor

Prof. Dr. Juan Bautista De Sanctis

Institute of Molecular and Translational Medicine, Faculty of Medicine and Dentistry, Palacký University, 77900 Olomouc, Czech Republic

### Deadline for manuscript submissions

closed (30 December 2024)

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid  
by authors or their institutions.

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO,  
and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 31.6 days after  
submission; acceptance to publication is undertaken in 2.9  
days (median values for papers published in this journal in  
the first half of 2025).
