Message from the Guest Editor

Dear Colleagues,

Visual perception is the result of a complex chain of information processing carried out by biological systems, such as the visual brains of primates and other species, or by artificial systems, such as computer-driven neural networks or robots. The goal of this Special Issue on '*Information-Centred Approaches to Visual Perception*' is to reveal the variety of distinct functional properties and mechanisms of information processing for visual perception. These can be biologically inspired or not and may highlight how the processing of light, colour, structure, texture, or shape is achieved by a living or an artificial perceptual system within a given context.

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

Journal Rank: [CiteScore - Q2](#) (*Information Systems*)
