Deadline for manuscript submissions:
closed (30 June 2020)
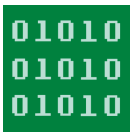

Message from the Guest Editor

The development of communication technologies has been stimulating new thinking on the issue of information overload. Communication through multiple technologies and at all times can be so overwhelming that it is in itself inhibiting the development of solutions to deal with information overload, making it necessary to deal with the eventual communication overload issues prior to the information itself.

The rationale of this Special Issue can be summarized in the following question: What information and communication technologies should be implemented, managed, and used so that people receive and process the right information, in the right format and in due time to make high-quality decisions, thus overcoming situations of information and communication overload?

This Special Issue seeks to include studies on the causes and solutions of information and communication overload:

- Causes of information/communication overload;
- Technological solutions to information/communication overload;
- Management solutions and approaches to information/communication overload;
- Decision process and information/communication overload;
- Future trends on information/communication overload.

Special Issue

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.
Journal Rank: CiteScore - Q2 (*Information Systems*)
