Deadline for manuscript
submissions:

closed (15 October 2021)

This Special Issue focuses on the use of advanced techniques to mine and exploit heterogeneous digital data on illicit activities for descriptive or predictive analyses.

Digital technologies as well as digital information and communication networks facilitate illicit activities such as illicit financial flows, illicit art and drug markets, forbidden posts and comments on social media, and recruitment or incitement of illicit activities such as any form of radicalization, etc. New models, methods and tools need to be developed to prevent, detect or warn, and possibly mitigate or hinder these illicit actions.

These methods encompass machine learning or data mining models as well as visualization models to help in detecting or mitigating possible illicit activities.

This Special Issue aims to gather both research papers reporting new scientific results and technical papers reporting project results, demos/prototypes/tools.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

Journal Rank: [CiteScore - Q2](#) (*Information Systems*)
