Private Information Retrieval: Techniques and Applications

Message from the Guest Editors

Private information retrieval (PIR) refers to the scenario where a user wishes to download content from an untrusted (and possibly distributed) database without revealing which records he or she is interested in. PIR dates back to the mid-1990s and the literature on the topic is vast. However, in the digital age, with the surge of distributed information systems, strong privacy concerns have arisen. This has spurred a new wave of research on PIR, which is now a very active research area within the information theory and computer science communities. Despite many recent advances in the area, important research problems still remain open. For example, the fundamental limits of PIR are still unknown in several important scenarios, and several practical aspects of PIR remain to be solved, so that it leaves the realm of research and becomes a reality in the real world. This Special Issue invites submissions of high-quality original technical and survey papers in this very vibrant area, addressing both theoretical and practical aspects of PIR, hopefully inspiring researchers to identify practical use cases.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo

School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Information Systems) /
CiteScore - Q2 (Information Systems)
