Special Issue

Modeling of Supply Chain Systems

Message from the Guest Editor

Supply chain systems involve multiple stakeholders with widely varying cooperative and competitive interests. This Special Issue calls for papers that describe new modeling methodologies and case studies that demonstrate how these methodologies can improve the efficiency and resilience of supply chain systems. Predictive and analytical models that address the challenges and supply chain vulnerabilities of the various phases of the product life cycle are encouraged. Models that focus on the impact of infrastructures and the environment on supply chain processes or on supply chain disruptive events are welcome. Interested authors are invited to contribute their original, unpublished work. Topics of interest include but are not limited to:

- Predictive models for supply chain processes;
- Analytical models for planning and operation decision support;
- Complex adaptive supply chain systems;
- Modeling of collaborative, cooperative and/or competitive systems;
- Distributed system modeling;
- Case studies and applications of new technologies;
- Contributed data and data repositories.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo
School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:
indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:
JCR - Q2 (Computer Science, Information Systems) / CiteScore - Q2 (Information Systems)
