

Special Issue

Information-Centred Approaches to Visual Perception

Message from the Guest Editor

Visual perception is the result of a complex chain of information processing carried out by biological systems, such as the visual brains of primates and other species, or by artificial systems, such as computer-driven neural networks or robots. The goal of this Special Issue on '*Information-Centred Approaches to Visual Perception*' is to reveal the variety of distinct functional properties and mechanisms of information processing for visual perception. These can be biologically inspired or not and may highlight how the processing of light, colour, structure, texture, or shape is achieved by a living or an artificial perceptual system within a given context.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo

School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Information Systems) /
CiteScore - Q2 (Information Systems)
