

Special Issue

Big Spatial Data Management

Message from the Guest Editor

The special issue covers a wide spectrum of data types and information including (a) Raster data, e.g. Geoimages, (b) Vector data, e.g., Points, Lines, Polygons, and (c) Graph data, e.g. Road network graph. The special issue of “Big Spatial Data Management” deals with massive amounts of real-time spatial and spatio-temporal data obtained from billions of sensors, location-aware devices, remote sensing satellites, and various models of the physical world. The use of Big Spatial Data Management spans a variety of applications including crowdsourcing, social networks, earth sciences, transportation, communication networks, online maps, smart cities and urban planning, remote sensing, crisis and evacuation management, to name but a few.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo

School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Information Systems) /
CiteScore - Q2 (Information Systems)
