Stitching, Alignment and Segmentation Applications in Biomedical Images

Message from the Guest Editors

Image stitching, alignment, and segmentation are common image processing steps in biomedical processing tasks, which are attracting more and more computer vision researchers' attention. Although many conventional methods and machine-learning-based methods have been proposed to solve those problems, challenges still exist, e.g., 1) varied image quality (especially for some medical images); 2) large data size (may be terabyte to petabyte level); 3) high-precision requirement in biomedical scenarios. Thus, more advanced algorithms for image stitching, alignment, and segmentation are urgently needed.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo

School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Information Systems) /
CiteScore - Q2 (Information Systems)
