User Behavior Modeling and Mining: A Special Focus on the Spatial and Semantic Aspects of User Behavior

Message from the Guest Editors

Human behaviour is complex, multi-level and multimodal. In addition, behaviour is shaped by the environment and context. Modelling user behaviour at an aggregated level typically involves analysing human mobility through virtual or physical activities. Human physical mobility models can provide input to transportation modelling, urban planning, public health and population studies. Human virtual mobility models can help with data narration, interactive tool designs, social network analysis, and recommender systems. The techniques or approaches to model and analyse behaviour are varied. They may be multidisciplinary and include statistical models, agent-based approaches, machine learning and visualisation tools. Moreover, the modelling can be conducted at different levels of granularity, from raw traces to rich semantic ones. This Special Issue welcomes submissions that provide new approaches and perspectives or introduce new challenges and tasks related to human behaviour modelling and mining, specifically considering the semantic and spatial aspects of human behaviour. Additionally, articles which provide an overview of the topics are welcome.

About the Journal

Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

Information is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

Editor-in-Chief

Prof. Dr. Willy Susilo

School of Computer Science and Software Engineering, University of Wollongong, Northfields Avenue, Wollongong, NSW 2522, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q2 (Computer Science, Information Systems) /
CiteScore - Q2 (Information Systems)
