Message from the Guest Editors

Smart materials are materials that exhibit a stable and reproducible response, by means of significantly changing one or more of their properties in response to externally applied stimuli. The goal of this Special Issue is to publish original research papers or review articles focused on the use of smart materials for sustainable infrastructures. The characterization of smart materials, together with the assessment and monitoring of short- and long-term performance and other state-of art papers related to smart materials, is also encouraged.

Topics of interest include but are not limited to:

- Advances in sustainable and resilient structures;
- Monitoring, surveillance, and field measurement methods;
- Intelligent structures;
- Smart construction materials (smart concretes, smart bricks, smart wraps, etc.);
- Smart non-construction materials (smart composites, smart glasses, smart green roofs, smart paints, etc.);
- Self-healing materials;
- Shape memory alloys;
- Piezoelectric materials.

Message from the Editor-in-Chief

You are invited to contribute a research article, review or short communication for consideration and publication in *Infrastructures* (ISSN 2412-3811). There is no restriction on the length of the papers. *Infrastructures* is published in open access format. The scientific community and general public have unlimited free access to the content as soon as it is published. *Infrastructures* is supported by the authors by the payment of article processing charges for accepted manuscripts. Please consider *Infrastructures* as an exceptional opportunity to publish your work.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (Construction and Building Technology) / CiteScore - Q1 (Building and Construction)
