Message from the Guest Editors

Dear Colleagues,

The pavement network is one of the largest heritage assets in a country. Its management is essential to maintain the network in a good condition and reduce transport costs and emissions. Pavement Management Systems (PMSs) are used to provide effective and efficient directives to allocate resources ensuring good pavement conditions and reducing life-cycle costs. One of the main steps of a PMS is the inspection to determine the pavement condition. For this purpose, different devices and methods are used to collect and analyse data. In addition, a PMS uses this data to evaluate the deterioration over an analysis period and define more effective management plans that may address sustainability strategies. This Special Issue is seeking papers that explore new ways of inspection and life-cycle assessment of pavements that reduce the life-cycle cost and environmental impact and promote social progress.

Message from the Editor-in-Chief

You are invited to contribute a research article, review or short communication for consideration and publication in *Infrastructures* (ISSN 2412-3811). There is no restriction on the length of the papers. *Infrastructures* is published in open access format. The scientific community and general public have unlimited free access to the content as soon as it is published. *Infrastructures* is supported by the authors by the payment of article processing charges for accepted manuscripts. Please consider *Infrastructures* as an exceptional opportunity to publish your work.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Journal Rank: CiteScore - Q2 (*Building and Construction*)
