

# Special Issue

## Concrete Structures: Present and Future Trends

### Message from the Guest Editor

Reinforced Concrete is the material selected to build most of the world's infrastructure. In the recent years, due to the decrease of new construction and the fact that much of this infrastructure is reaching the end of service life, maintenance, repairing and strengthening strategies have become even more important issues. The rehabilitation sector is, nowadays, a major force in what concerns the concrete structure industry. On the other hand, some of these structures are indispensable landmarks and should be part of Concrete Heritage. The Special Issue, "Concrete Structures: Present and Future Trends", aims to provide an overview of the current state-of-the-art, covering all relevant new developments in the topics above, or any others not mentioned but related to the main topic. Studies can range from experimental tests to applications in real case studies.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article, review or short communication for consideration and publication in *Infrastructures* (ISSN 2412-3811). There is no restriction on the length of the papers. *Infrastructures* is published in open access format. The scientific community and general public have unlimited free access to the content as soon as it is published. *Infrastructures* is supported by the authors by the payment of article processing charges for accepted manuscripts. Please consider *Infrastructures* as an exceptional opportunity to publish your work.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Civil) / CiteScore - Q1 (Building and Construction)
