submissions:

closed (31 July 2019)

Message from the Guest Editor

Dear Colleagues,

Metal clusters are remarkable compounds, which demonstrate the versatility of metals at forming the most various architectures at a molecular level. Within this field, metal clusters stabilized by carbonyl ligands are of great relevance, as documented by the isolation and characterization of countless examples of both homoleptic and heteroleptic species. TMCC are closely related to monolayer-protected nanoparticles and could find possible applications in the field of biology, catalysis, and nanoscience.

This Special Issue aims to collect the research contributions of recent advances in the syntheses, properties, and applications of TMCC and share them with a broad audience, to keep drawing attention to this fascinating area of scientific research.

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and *Inorganics* offers authors the opportunity to publish exciting new research in an open access format.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Inorganic & Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
