

## Special Issue

# Advanced Electrocatalysis Materials Design: Innovations and Applications

### Message from the Guest Editor

To accelerate the advancement of affordable and environmentally friendly electrocatalysts, it is crucial to embrace numerical simulations for directly accessing information about electrochemical reactions. This Special Issue aims to present research findings obtained through theoretical simulations, including the following:

- **Theoretical Simulations:** Utilizing computational methods such as density functional theory, molecular dynamics, or quantum mechanics/molecular mechanics to investigate diverse electrocatalysis processes.
- **Electrocatalyst Design:** The rational design and optimization of electrocatalysts for energy conversion and storage applications, including fuel cells, batteries, and electrolyzers, with insights derived from theoretical simulations and collaborative experimental–theoretical research.
- **Reaction Mechanisms:** Investigations into reaction mechanisms at the atomic and molecular levels, elucidating the underlying processes of electrocatalytic reactions.
- **Materials Discovery:** Explorations of new materials and nanostructures with enhanced electrocatalytic properties, including the development of novel catalysts for sustainable energy solutions.

## About the Journal

### Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and Inorganics offers authors the opportunity to publish exciting new research in an open access format.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Inorganic Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
