

Special Issue

Design, Synthesis, and Application of Magnetic Composites

Message from the Guest Editor

This Issue is devoted to fundamental research in experimental and theoretical solid-state physics and related fields. We aim to place a special emphasis on the synthesis, structure and doping of element ions into a crystal lattice. In addition, we welcome applied contributions aimed at the latest discoveries in new materials such as magnets, dielectrics, and phase change materials. Submissions such as original research articles, reviews and communications will be considered on all aspects of solid-state physics.
Dr. Denis S. Klygach

About the Journal

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and Inorganics offers authors the opportunity to publish exciting new research in an open access format.

Editor-in-Chief

Prof. Dr. Duncan H. Gregory

School of Chemistry, University of Glasgow, University Avenue, Glasgow

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Inorganic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
