Special Issue

Recent Advances in Water Oxidation Catalysis

Message from the Guest Editor

The development of renewable energy sources is among the most important challenges of the 21st century. Water splitting, i.e., the conversion of water into molecular oxygen and hydrogen, holds great promise for solving some ubiquitous issues related to the storage and transport of energy. Until now, the key-bottleneck of this process was the water oxidation reaction, which generates molecular oxygen, as well as protons and reduction equivalents. Designing catalysts for this reaction is currently a topic of outstanding interest. Numerous catalysts have been presented for both photo- and electro-catalytic water oxidation. Some of those catalysts were inspired by nature's oxygen evolving complex in photosystem II. Other directions are concerned with the development of macromolecular and nano-materials, up to thin films and solid materials tuning, which opens an exciting interdisciplinary field for homogeneous and heterogeneous catalysis. This Special Issue aims at recent advances in water oxidation catalysis and invites contributions in order to highlight the variety and importance of this vibrant research field.

About the Journal

Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and Inorganics offers authors the opportunity to publish exciting new research in an open access format.

Editor-in-Chief

School of Chemistry, University of Glasgow, University Avenue, Glasgow G12 8QQ, UK

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Inorganic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.9 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
