Deadline for manuscript submissions:
closed (31 August 2024)

Message from the Guest Editor

Dear Colleagues,

Migratory insects are usually the most devastating pests of crops and are broadly distributed throughout the world. Their migratory behavior is one of the most important factors that can induce sudden pest outbreaks. Monitoring and early warning, as well as integrated pest management technologies, play significant roles in managing pest outbreaks.

The themes of this Special Issue include migratory insect occurrence and damage, overwintering regulation, migration regulation, monitoring and early warning, and integrated pest management technologies; the type of papers that will be accepted include reviews, reports, and research articles.

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank: JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)
