Message from the Guest Editors

Dear Colleagues,

In the last decades pest management in orchards and vineyards has been driven by continual innovations aimed at the reduction of pesticides use in these systems. On one hand, research has been focused on a deeper understanding on the biology and ecology of the key pests in orchards and vineyards and the development of new approaches for their management. On the other hand, new invasive or emerging pests pose new challenges. This special issue will collect original research articles that shed light on basic aspects of the biology and ecology of arthropod pests occurring in orchards and vineyards as well as articles devoted to the management of these pests within an IPM framework.

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank: JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)
