Deadline for manuscript
submissions:
closed (28 February 2019)

Message from the Guest Editor

Dear Colleagues,

Biological control using predators, parasitoids, or pathogens has been recognized as an effective method to control plant pests in agricultural systems, especially in protected culture, i.e., greenhouses. The aim of this special issue is to highlight recent advances in biocontrol research in greenhouses, high tunnels, nurseries, and plantscapes. Authors are invited to submit manuscripts describing research on any aspect of biocontrol in protected culture. Experimental and theoretical approaches to the study of natural enemy behavior, ecology, physiology, or nutrition are encouraged.

Dr. Eric W. Riddick
