Deadline for manuscript
submissions:

closed (30 September 2019)

Message from the Guest Editors

Dear Colleagues,

Climate change, disturbance events, invasive species, and patterns of land use are among key drivers that interact to impact the distribution, abundance, and evolution of forest insects in a changing world. This Special Issue of *Insects* will broadly address the effects of global change on ecology and management of insects along a gradient of wilderness, managed, plantation, and urban forests. We invite submissions, including reviews and primary research reports, that address effects and implications of environmental change on insects in forest ecosystems including community and population ecology, biodiversity and conservation, biological invasions, ecosystem services, and pest management.

Dr. Daniel A. Herms

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank: JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)
