Special Issue

Invasive Pest Management and Climate Change—2nd Edition

Message from the Guest Editors

Climate change is altering vital aspects of our environment, such as temperature, precipitation, the frequency of extreme weather events (hurricanes, fires, and floods, etc.), atmospheric composition, and land cover. Indeed, the temperature, atmospheric concentration of carbon dioxide CO2, and available nutrients are key factors that drive species survival, growth, development, and distribution. This Special Issue will include original research articles and reviews by leading research entomologists, plant pathologists, weed control specialists, and associated experts. Articles will focus on the development, improvement, and implementation of invasive pest management under climate change patterns. Additionally, articles that outline the integration of effective IPM options for a given pest species under climate change patterns in food crops, forestry, and urban areas will be particularly welcome. Considering the success of our previous Special Issue "**Invasive Pest Management and Climate Change**", we are pleased to launch **"Invasive Pest Management and Climate Change—2nd Edition"**. Both original submissions and reviews will be considered for publication.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler
Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
