

Special Issue

Recent Advances in Migrant Insect Pests

Message from the Guest Editor

Migratory insects are usually the most devastating pests of crops and are broadly distributed throughout the world. Their migratory behavior is one of the most important factors that can induce sudden pest outbreaks. Monitoring and early warning, as well as integrated pest management technologies, play significant roles in managing pest outbreaks. The themes of this Special Issue include migratory insect occurrence and damage, overwintering regulation, migration regulation, monitoring and early warning, and integrated pest management technologies; the type of papers that will be accepted include reviews, reports, and research articles.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
