Ecology and Evolution of Myrmecophilous Associations

Message from the Guest Editors

Associations with ants range from mutualistic to parasitic and can involve distantly related organisms. Since the first attempts to describe the amazing diversity of species interacting with ants, current research has dissected various aspects of these associations. Several studies have investigated the coevolution between partners, the morphological or behavioral adaptations, the communication signals involved in the interactions, and the relative fitness of partners using a multidisciplinary approach that enables tackling the complexity of these relationships. We believe that the outcomes obtained so far will pave the way to understanding how myrmecophily could have played a pivotal role in the evolution and ecology of several organisms and shaped the community structure of many terrestrial ecosystems. This Special Issue will focus on the underlying mechanisms fostering associations between ants and various organisms. We will target all groups of myrmecophiles in the broader sense, including insects but also other invertebrates, fungi, and plants. Physiological, ethological, and ecological studies are welcomed.

About the Journal

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
