Special Issue

Spodoptera frugiperda: Current Situation and Future Prospects

Message from the Guest Editors

Spodoptera frugiperda is one of the main crop pests in the world, causing damage to plants of various families, affecting leaves, pods, flowers, and stems. Currently, this insect has been one of the challenges in the field of crops that requires intensive management. Therefore, this Special Issue will address resistance management, pest bioecology in different crops, biological control (pathogens, predators, and parasitoids), behavior control (semiochemical), and the use of oil and plant extracts and new technologies (RNAi and CRISPR) in pest management. Basic and applied research is encouraged to be submitted to this Special Issue. Bibliographic review works will also be evaluated. We look forward to receiving your submissions.

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
