Special Issue

Biology, Genetics and Evolution of Mosquitoes

Message from the Guest Editors

The research literature on mosquitoes over the past two decades has increasingly placed this group of insects at the forefront of contemporary thinking within the broad discipline of evolutionary genetics. Deep insights into the molecular genetics of mosquito have been realized by laboratories exploring ways to disrupt their hostseeking behaviors. Exploration of mosquito/pathogen and mosquito/host coevolution is being illuminated by research on mosquito immune and salivary proteinencoding genes. The field of speciation biology is actively under study by mosquito research community who are taking advantage of the vast amount of wholegenome sequencing data available for an increasing number of mosquito species. Advances in nextgeneration sequencing technology have helped to make studies with large number of individual field-collected mosquitoes feasible, resulting in advances within the field of population genomics. In this Special Issue, we aim to select a number of papers authored by leaders in the field of mosquito biology and evolution.

Guest Editors

Prof. Dr. João Pinto

Prof. Dr. Frederic Simard

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
