Special Issue

Beetles in Integrative Entomology: Biology, Taxonomy, and Conservation

Message from the Guest Editor

Beetles (Insecta: Coleoptera) are the most common group of insects, inhabiting a wide range of habitats and playing a vital role in ecosystems. Consequently, beetles will continue to be an important subject of research, ranging from field to molecular studies. This Special Issue focuses on research that blends field surveys and laboratory and molecular experiments to address difficulties in beetle biology, zoography, phylogeny, and taxonomy. Articles on the application of integrative entomology in beetle protection are also appreciated. Preference will be given to works that show strategies for understanding and combining data from various domains of entomology. We look forward to receiving your submissions.

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
