

Special Issue

Insects and Their Derivatives for Human Practical Uses 3rd Edition

Message from the Guest Editors

Insect culture has some environmental advantages compared to other forms of animal production; as such, insects are currently considered part of the circular economy. Nevertheless, the use of insects has not yet been widely adopted by humans. Insects have been proposed as a source of protein and valuable fatty acids, and chitin has been described as a probiotic and as suitable for use in recyclable containers. Insects are also useful in medical therapies. This Special Issue of *Insects* aims to present multidisciplinary approaches focused on the use of insects and their derivatives for human purposes, such as for nutritional, medical, and legal purposes, in rearing systems, for food safety, and as environmental markers. Considering the success of our previous Special Issues, entitled "[Insects and Their Derivatives for Human Practical Uses](#)" and "[Insects and Their Derivatives for Human Practical Uses 2nd Edition](#)", we are pleased to launch "[Insects and Their Derivatives for Human Practical Uses 3rd Edition](#)". Submissions of both original research and reviews are welcome for consideration for publication.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
