Opportunities and Challenges in Insect Functional Genomics

Message from the Guest Editors

The advent of the Genomics Era has afforded life science a powerful new tool in the 21st century. This Special Issue will focus on the mechanisms and applications of insect functional genomics. Over the past 20 years, functional genomics toolsets, such as RNA interference (RNAi) and CRISPR/Cas9-based genome editing, have been broadly adopted in entomological research to decipher gene functions in insects. Further, genomic approaches such as RNA-seq and genome-wide association study (GWAS) can provide important insights into gene function, and these approaches can be used in practically any insect species. With the success of these approaches in bench-top research, attention has now shifted to potential applications in agriculture, especially for the control of arthropod pests. We would like to invite all works, original research and/or review articles, covering insect functional genomics to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler
Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
