Special Issue

Insect Microbiome and Immunity

Message from the Guest Editors

Insects comprise the most diverse groups of organisms and live in diverse environments. As with all other organisms, insects encounter a wide range of microbes. While they rely on the innate immune system to combat these invading microbes to maintain homeostasis, some microbial communities of the insect microbiome can benefit the host and profoundly affect host physiology and overall fitness. Microbiotas have been proven to provide nutrients, promote host defense, and mediate host reproductive behavior. In recent decades, the emergence of high-throughput sequencing has enabled researchers to study host-microbe interactions from the whole microbiome level rather than single microbial species, greatly expanding our knowledge of insect biology.

Guest Editors

Prof. Dr. Hongyu Zhang

Prof. Dr. Xiaoxue Li

Dr. Yin Wang

Deadline for manuscript submissions

26 August 2025

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
