

Special Issue

Ecologically Important Symbioses in Insects

Message from the Guest Editor

Insects perform critical functions in natural and managed terrestrial ecosystems that are often mediated by microorganisms. For example, microbial symbionts influence herbivore interactions with plants by synthesizing limiting nutrients, breaking down difficult-to-digest plant polymers, and detoxifying plant defenses. Symbionts also influence interactions with natural enemies by producing bioactive compounds that disable threats. Thus, ‘hidden’ microbial players can have large effects on insect performance with large implications for food security and natural systems challenged by climate disruption. We are pleased to invite original research papers and review articles focused on ecological symbioses. Suitable topics for this Special Issue include (but are not limited to) research on symbiont-mediated phenotypes, mechanisms underlying symbiont function, symbiont genomics, coordination of host and symbiont functions, symbiont transmission, interactions between insect immunity and symbionts, the population dynamics of ecological symbioses, and the manner in which a changing climate impacts insect–microbe interactions.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 16.7 days after
submission; acceptance to publication is undertaken in 2.4
days (median values for papers published in this journal in
the second half of 2024).
