## **Special Issue**

# Aquatic Insects Biodiversity and eDNA Monitoring

## Message from the Guest Editors

Aquatic insects stand as indispensable sentinels, monitoring changes in freshwater ecosystems and offering vital insights into environmental alterations. DNA-based methods emerge as powerful tools for accurately identifying aquatic insects. Specifically, eDNA metabarcoding, coupled with sensitive, cost-effective, and rapidly advancing DNA sequencing technologies, holds immense importance in biodiversity monitoring and environmental policy formulation.

This Special Issue aims to gather high-quality, original research that further illuminates our understanding of aquatic insect biodiversity, evolution, and ecology. We eagerly await submissions in the fields of both traditional and molecular taxonomy, eDNA metabarcoding, phylogeny, ecology, and biogeography. We encourage contributions that explore novel applications of these methodologies, especially those that advance our knowledge of aquatic insect taxonomy and ecology and their role in freshwater ecosystems. By compiling a collection of cutting-edge research, we hope to pave the way for a deeper understanding and appreciation of these vital organisms.

## **About the Journal**

## Message from the Editor-in-Chief

#### Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

#### **Author Benefits**

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

## **Journal Rank:**

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
