Advances in Insect Pest Management: Innovative Approaches to Enhance Plant Protection

Message from the Guest Editors

Innovative approaches to insect pest management must focus on the integration of novel technologies, biological methods, and sustainable practices to reduce our reliance on pesticides.

In order to provide sustainable and safe food production, these issues must be addressed in conventional, organic and integrated agricultural farming.

This Special Issue of *Insects* aims to provide an overview of research regarding the development of interventions that manage insect pest populations to enhance the protection of plants. Therefore, we are pleased to invite leading researchers (entomologists, plant protection specialists and associated experts) to submit review and original research articles to this Special Issue of *Insects*. The scope of this Special Issue includes, but is not limited to, the following topics: plant protection; crop protection; insects control; alternative measures; organic agriculture; biocontrol agents; plant–insect interactions; biological control; biopesticides; pests

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
