Arthropod Diversity and Conservation in Islands

Message from the Guest Editors

Islands are key ecosystems for global biodiversity conservation, being the home for high numbers of endemic species, unique evolutionary lineages, and interesting species interactions. Many factors may have considerable effects on arthropod diversity, ecological interactions, and even species survival. Therefore, it is essential to improve our understanding of the drivers of island arthropod biodiversity to inform and adopt the most appropriate conservation management practices in island ecosystems. In this Special Issue, we aim to analyze island biodiversity patterns and their drivers, assess the spatiotemporal dynamics of species diversity, abundance, and distribution and evaluate changes in species interactions due to human disturbance and invasive species. Furthermore, we also aim to assess the effects of conservation-related activities on valuing and protecting arthropod biodiversity at species and community levels. Both original research articles and reviews are welcome to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler
Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
