

Special Issue

Interactions Among Threats to Honeybee Health

Message from the Guest Editors

Over the past decade worldwide decline of honeybee populations has created a potential crisis given their importance as pollinators of agricultural crops. The influx of research articles on this issue has identified parasites and pathogens, pesticide exposure, and poor nutrition as major threats to honeybee health. Recent data indicate that these threats may interact to inflict increased harm. This special issue will include original research articles focused on interactions between diverse threats to honeybee health, and especially on how interacting threats affect honeybee physiology and immunity.

About the Journal

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
