

## Special Issue

# Big Data and Pollinator Health

### Message from the Guest Editors

Landscape and weather data are critical for assessing habitat and productivity of pollinators, longitudinal studies help to identify the causes of success and decline, and genomic data can be used to clarify the biologies of pollinators and their associates. This issue will focus on methodologies and interpretations of big and integrative data, from planning to data collection and informatics. We look forward to large-scale landscape, geography, and weather data; systems biology datasets from controlled experiments; as well as large surveys and meta-analyses. Various strategies, including “-omics”, gene annotation, epidemiology, and complex modelling are encouraged, even when the answers involve negative results. We also seek reviews of current and past methodologies and datasets that improve our understanding of pollinator health. We expect all presented datasets will be freely accessible for future analyses and interpretation.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Brian T. Forschler  
Department of Entomology, University of Georgia, 413 Biological  
Sciences Building, Athens, GA 30602-2603, USA

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,  
PMC, PubAg, and other databases.

##### Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.1 days after  
submission; acceptance to publication is undertaken in 2.9  
days (median values for papers published in this journal in  
the first half of 2025).
