Recent Advances in Fall Armyworm Research

Message from the Guest Editors

The fall armyworm, an invasive pest from the Americas, is rapidly spreading through the Old World. It has a wide range of hosts and catastrophic destructive capability—it has about 353 host species, remarkably corn, with 15–73% of the yield loss of corn caused by its higher-instar larva. In this Special Issue we review the most up-to-date research developed for the biology, ecology and control of this pest.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
