Honey Bee Nutrition

Message from the Guest Editors

Poor nutrition is one of the major factors attributed to honey bee colony declines over the past decade. Habitat loss, intensive agriculture, monocultures, and changes in plant flowering phenology are most likely contributors to poor nutrition. Honey bee nutrition plays a vital role in mitigating the effects of both biotic and abiotic stressors on bees. Currently, there is huge gap in knowledge pertaining to honey bee nutrition. Given the importance of nutrition, it is imperative to understand honey bee nutrition holistically. In this Special Issue, we aim to publish original research articles pertaining to honey bee nutrition.

About the Journal

Message from the Editor-in-Chief

Arthropods are a diverse and abundant group of animals that are important to a variety of research dictates. For example, hexapods act as bio-indicators of ecosystem function and pest status and serve as model systems for questions concerning physiology, embryology, genetics, and social interaction. The editorial board and staff at *Insects* is committed to providing contributors an open access forum to showcase objective and innovative research as well as succinct review articles. Our journal is dedicated to providing timely and thorough review of qualified submissions and we welcome you to submit a contribution.

Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, GEOBASE, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.9 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
