Special Issue

A Review of Household and Structural Pest Management with an Emphasis on Alternative Control Methods

Message from the Guest Editors

Concerns about potential contamination of water sources and insecticide resistance have led researchers to evaluate alternative pest control strategies, such as essential oils and other biorationals, that are less persistent in the environment and provide different modes of action to overcome resistance. In this special edition of *Insects* alternative pest management strategies and innovative inspection/detection techniques for household and structural pests (cockroaches, pest ants, termites, flies, pantry pests, fleas, and brown marmorated stink bug) are reviewed.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
