Integrated Pest Management Strategies for Horticultural Crops

Message from the Collection Editor

The high-quality standards required by retailers and their customers present a particular challenge to those who manage the pests of horticultural crops. This is exacerbated by the great diversity of crops grown, each on a relatively small area, leading to a limited 'market' for anyone developing novel methods of pest control. However, there is an undoubted need for effective IPM strategies on a range of horticultural crops to reduce reliance on chemical pesticides, manage pesticide resistance, and address the expectations of a market which is increasingly demanding 'perfect' but residue-free produce. This Special Issue will collect original and review articles that focus on Integrated Pest Management in horticultural crops, with a particular emphasis on approaches that are being integrated successfully into commercial practice.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
