Special Issue

Insect Vectors of Plant Pathogens

Message from the Guest Editor

Insect vectors are responsible for driving and spreading the most devastating plant disease epidemics. Many are emerging diseases caused by viruses, bacteria, and phytoplasmas that challenge a wide range of crops worldwide. In this Special Issue, we will focus on the ecology, behavior, and transmission of plant pathogens by insect vectors of plant disease such as aphids, whiteflies, psyllids, spittlebugs, leafhoppers, and thrips. Furthermore, we will focus on the interactions between insect vectors and their pathogens in a changing environment. Finally, novel control tactics against insect vectors as a way to limit disease spread will also be addressed.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler
Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, and other databases.

Journal Rank:
JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
