

## Special Issue

# Odonates in Human Environments

### Message from the Guest Editors

The anthropogenic transformation of natural habitats typically reduces biodiversity. However, some species thrive in human environments, facilitated by forest removal, expansion of agricultural grasslands, the construction of ponds and lakes, or increased habitat heterogeneity. Maintaining biodiversity requires that we identify species that profit and suffer from these changes and understand the consequences for the community and trophic dynamics. Odonates provide an excellent model system for studying these effects. Their complex life cycle is affected by changes in aquatic and terrestrial habitats, and they are important intermediate nodes both within and between aquatic and terrestrial food webs. In this Special Issue, we will examine how anthropogenic landscape modifications affect odonate abundance and diversity.

---

### Guest Editors

Dr. Wade B. Worthen

Biology Department, Furman University, Greenville, SC 29613, USA

Dr. Adolfo Cordero-Rivera

ECOEVO Lab, E. E. Forestal, Department of Ecology & Animal Biology, University of Vigo, Campus A Xunqueira, 36005 Pontevedra, Spain

---

### Deadline for manuscript submissions

closed (30 November 2021)

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Brian T. Forschler

Department of Entomology, University of Georgia, 413 Biological  
Sciences Building, Athens, GA 30602-2603, USA

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,  
PMC, PubAg, and other databases.

##### Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.9 days after  
submission; acceptance to publication is undertaken in 2.6  
days (median values for papers published in this journal in  
the second half of 2025).
