Ecology and Pest Management of Sugarcane Insects

Message from the Guest Editors

Most evolutionary ecologists believe that sugarcane first evolved in Papua New Guinea, probably near the Ramu river valley and on adjacent mountains where several component grass species occur today at different clines. Sugarcane entomological scientists write this issue from many different sugarcane countries, Australia, South Africa, Ecuador, Madagascar, Thailand, the U.S, and others. Because sugarcane is a monocot crop that grows differently in some places, different cultivars are quite often unique by area. Also, the use of certain insecticides is often exclusive to the United States. The purpose of this issue usually is to explain how we preserve biological control in countries outside of the United States of America.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Brian T. Forschler
Department of Entomology, University of Georgia, 413 Biological
Sciences Building, Athens, GA 30602-2603, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, PubAg, and other databases.

Journal Rank:

JCR - Q1 (Entomology) / CiteScore - Q1 (Insect Science)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.1 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
